EXPERIENCE

Spotify **New York, NY**

Senior Software Engineer *Nov 2024 – Present*

- Senior engineer on the adserving team, building and maintaining systems at the core of a high-throughput, high-availability ad stack serving 500k+ rps.
- Redesigned the adserving pipeline into a placement-based auction where multiple ad types compete in a single request, improving bid density, pod fill rate and winning-bid rate
- Built a content attribution system powering high-fidelity targeting and granular user/artist-level category opt-outs, enabling targeting unique to Spotify and giving artist more control over how ads are served on their content.
- Unified all demand sources into one auction and restricted budget deduction to winning bids, improving render rates while eliminating wasted ad spend.

Strava **San Francisco, CA**

Senior Software Engineer *May 2022 – Oct 2024*

- Senior engineer on the activities team, owning mission-critical services that carried among the highest operational load at the company, alongside a product suite spanning best efforts, goals, weather, and power analysis.
- Led development of a best-efforts feature suite that scaled to over 100 billion efforts and generated millions of dollars in subscription conversions, one of Strava's strongest growth drivers and a catalyst for cross-team expansion into achievements, challenges, and notifications.
- Led the Server Guild, running weekly backend-engineering workshops, overhauling the engineering interview process, and representing backend engineers across the org.

Google **Mountain View, CA**

Software Engineer II *July 2018 – August 2021*

- Designed an anomaly detection workflow using MapReduce and Bayesian analysis of Direct Linear Models to flag anomalous events across high-dimensional time-series of system health metrics spanning all Google first-party apps.
- Built a fraud detection system using a suite of abuse signals to flag suspicious activity for a promotions SDK incentivizing users across developing markets.
- Delivered Google Pay app features end-to-end, from Android/Flutter UI for OTP, SSN, and phone-number input to device-based fraud checks and card status-change flows.

Infinite Campus **Blaine, MN**

Software Engineer Intern *July 2017 – August 2017*

- Built daily Apache Airflow DAGs monitoring thousands of ElasticSearch indices, surfacing anomalies that prevented the loss of tens of millions of documents.

University of Miami Computer Science Department **Miami, FL**

Research Assistant *May 2016 – August 2016*

- Applied ML and PCA to 24-hour EMG data to detect coactive muscle activation and sleep/wake transitions in spinal cord injury subjects.

EDUCATION

Macalester College - B.A., Computer Science & Applied Mathematics **St. Paul, MN**

- August 2014 - May 2018

SKILLS

Languages: Java, Scala, Python, Ruby, TypeScript **Data:** SQL (PostgreSQL, MySQL), NoSQL (Bigtable), GraphQL **Architecture:** Distributed Systems, Event-Driven Architecture (Kafka, SQS, Pub/Sub) **Cloud & Infra:** AWS, GCP, Vercel, Docker **Frontend:** React, NextJS
